

# **Creating a RESTful API using express.js and creating a database and index in MongoDB**

**NAME : Yeddula Pavan Kumar Reddy**

**EMAIL [runrunner742@gmail.com](mailto:runrunner742@gmail.com)**

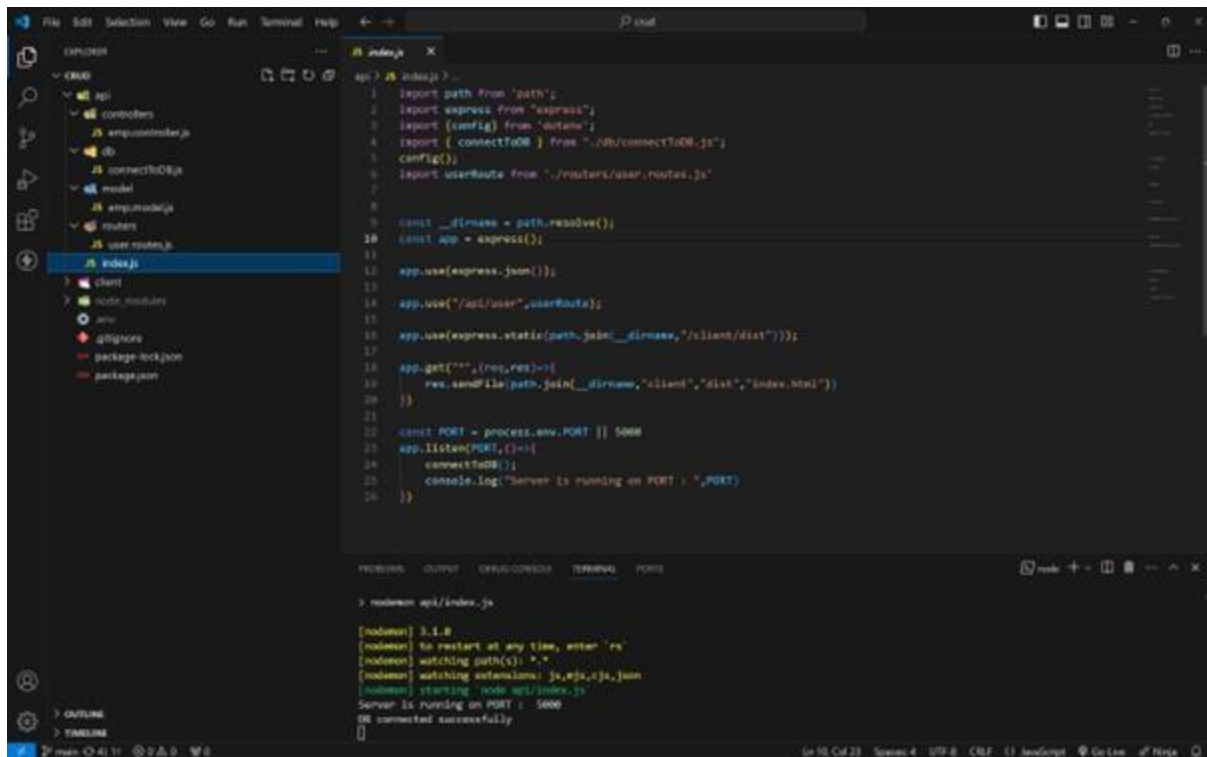

**PH.NO : 9701079526**

**ROLL.NO : 20A71A0533**

**COLLEGE : VARAPRASAD REDDY INSTITUTE OF  
TECHNOLOGY, KANTEPUDI, GUNTUR.**

**source code :**

**index.js file :**

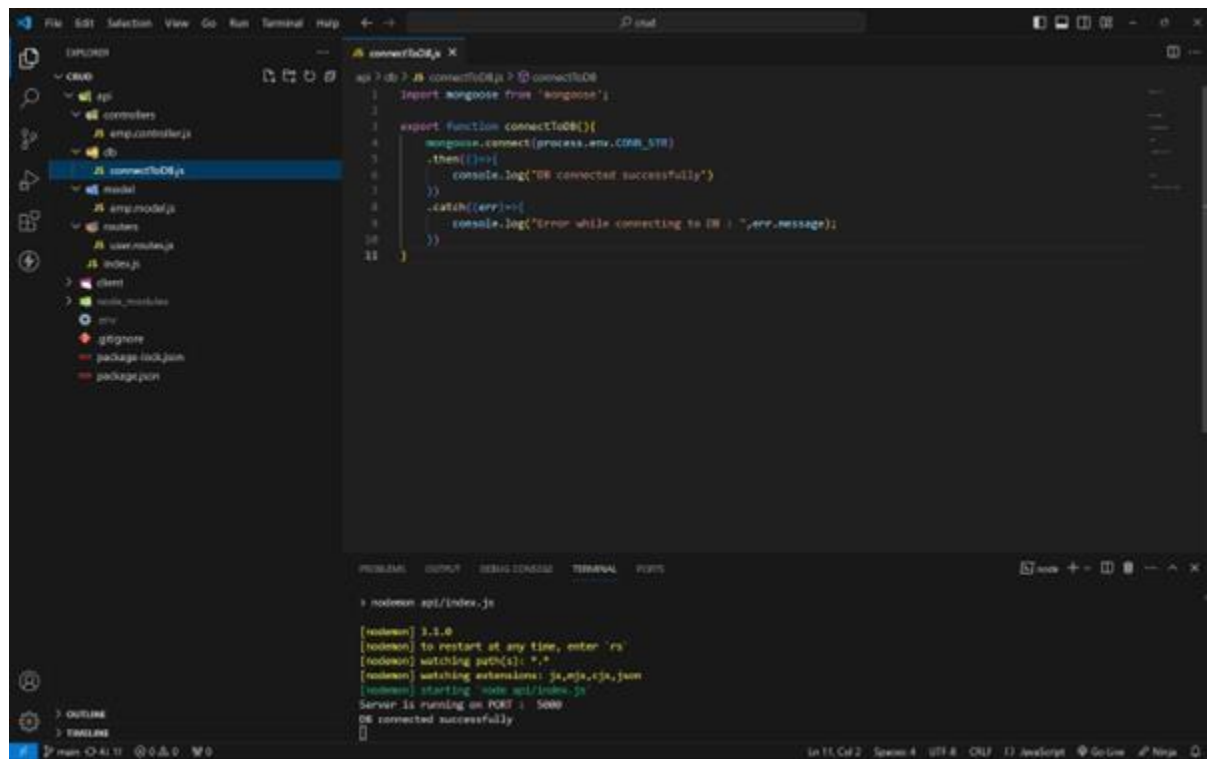

The screenshot shows a VS Code editor with a project named 'api'. The file explorer on the left shows a directory structure with files like 'api', 'controllers', 'db', 'connectToDB.js', 'model', 'emp.model.js', 'routes', 'user.routes.js', 'index.js', 'client', 'node\_modules', '.env', '.gitignore', 'package-lock.json', and 'package.json'. The 'index.js' file is selected and open in the editor. The code in 'index.js' is as follows:

```
1 import path from 'path';
2 import express from 'express';
3 import { config } from './config';
4 import { connectToDB } from './db/connectToDB.js';
5 config();
6 import userRoutes from './routes/user.routes.js';
7
8
9
10 const __dirname = path.resolve();
11 const app = express();
12 app.use(express.json());
13 app.use("/api/user", userRoutes);
14
15 app.use(express.static(path.join(__dirname, "/client/dist")));
16
17 app.get("/", (req, res) => {
18   res.sendFile(path.join(__dirname, "client", "dist", "index.html"));
19 });
20
21 const PORT = process.env.PORT || 5000
22 app.listen(PORT, () => {
23   connectToDB();
24   console.log("Server is running on PORT : ", PORT)
25 })
```

The terminal at the bottom shows the command 'node api/index.js' and the output:

```
[nodemon] 3.1.0
[nodemon] to restart at any time, enter 'rs'
[nodemon] watching path(s): *.*
[nodemon] watching extensions: js,mjs,cjs,json
[nodemon] starting 'node api/index.js'
Server is running on PORT : 5000
DB connected successfully
```

## MONGODB CONNECTION :

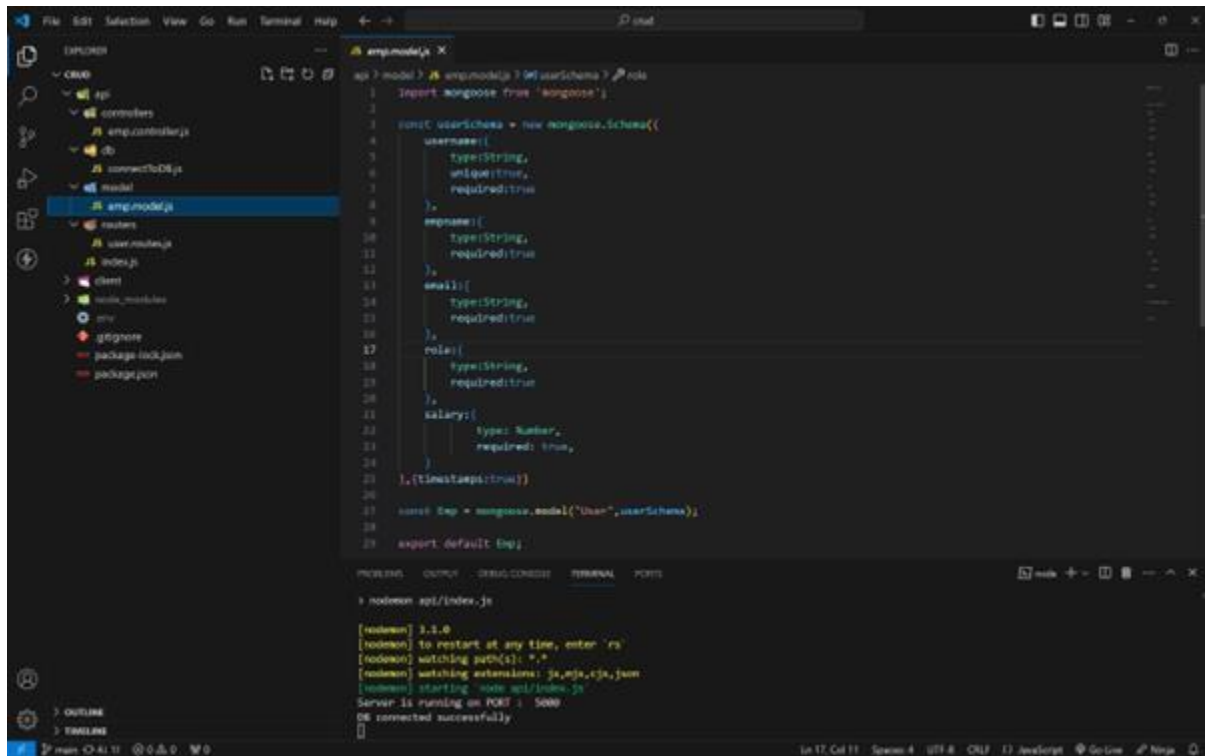

The screenshot shows a VS Code editor with the same project 'api'. The file explorer on the left shows the same directory structure. The 'connectToDB.js' file is selected and open in the editor. The code in 'connectToDB.js' is as follows:

```
1 import mongoose from 'mongoose';
2
3 export function connectToDB(){
4   mongoose.connect(process.env.DB_STR)
5   .then(() => {
6     console.log("DB connected successfully")
7   })
8   .catch((err) => {
9     console.log("Error while connecting to DB : ", err.message);
10   })
11 }
```

The terminal at the bottom shows the command 'node api/index.js' and the output:

```
[nodemon] 3.1.0
[nodemon] to restart at any time, enter 'rs'
[nodemon] watching path(s): *.*
[nodemon] watching extensions: js,mjs,cjs,json
[nodemon] starting 'node api/index.js'
Server is running on PORT : 5000
DB connected successfully
```

## MODEL :

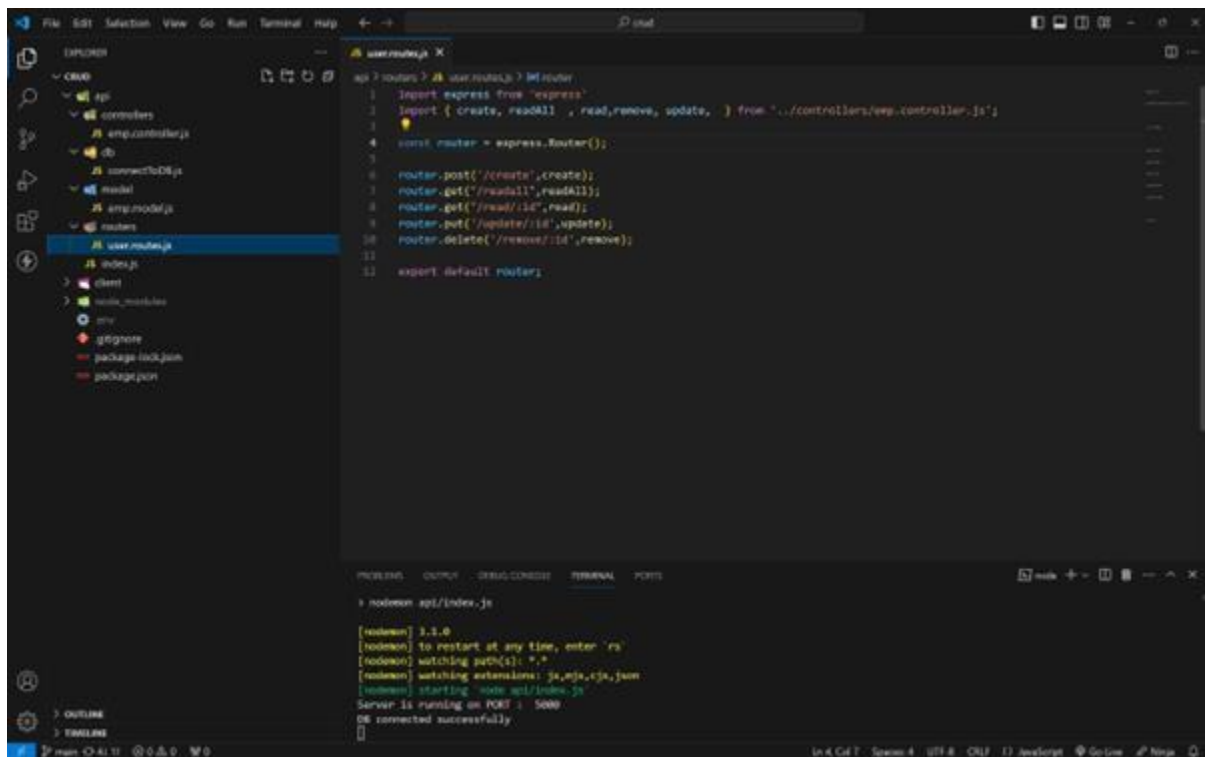

The screenshot shows the VS Code editor with the file explorer on the left. The file explorer shows a project structure with folders like 'api', 'controllers', 'db', 'model', 'routes', 'utils', 'views', and 'package.json'. The 'model' folder is selected, and the file 'model.js' is open in the editor. The code in 'model.js' defines a Mongoose schema for a user and a corresponding model. The terminal at the bottom shows the command 'node api/index.js' and the output, which includes the Node.js version (11.0), the path to the script, and the message 'Server is running on PORT : 5000'.

```
api > model > # empmodel.js > # role
1 import mongoose from 'mongoose'
2
3 const userSchema = new mongoose.Schema({
4   username: {
5     type: String,
6     unique: true,
7     required: true
8   },
9   email: {
10    type: String,
11    required: true
12   },
13   role: {
14    type: String,
15    required: true
16   },
17   salary: {
18    type: Number,
19    required: true
20   }
21 }, { timestamps: true })
22
23 const Emp = mongoose.model('User', userSchema);
24
25 export default Emp;
```

```
> node api/index.js
[nodemon] 1.1.0
[nodemon] to restart at any time, enter 'rs'
[nodemon] watching path(s): *.*
[nodemon] watching extensions: js,mjs,cjs,json
[nodemon] starting 'node api/index.js'
Server is running on PORT : 5000
DB connected successfully
```

## ROUTES:

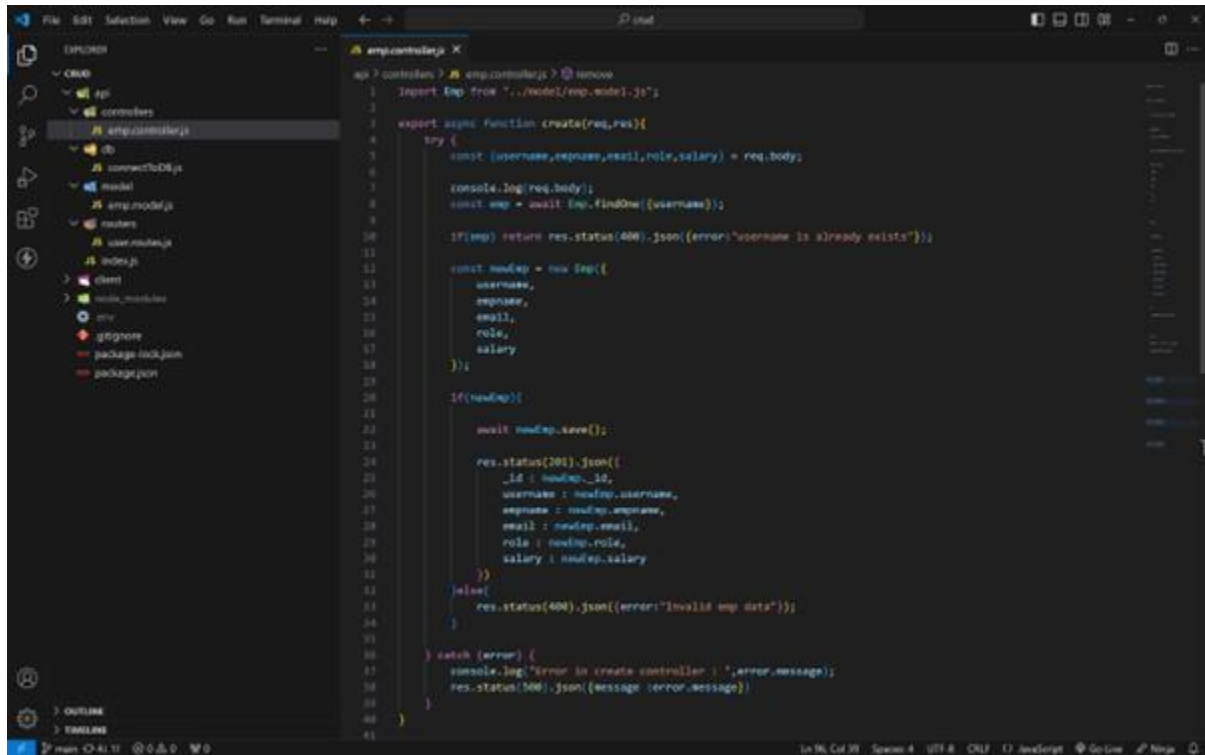

The screenshot shows the VS Code editor with the file explorer on the left. The file explorer shows a project structure with folders like 'api', 'controllers', 'db', 'model', 'routes', 'utils', 'views', and 'package.json'. The 'routes' folder is selected, and the file 'routes.js' is open in the editor. The code in 'routes.js' defines the Express.js routes for the application. The terminal at the bottom shows the command 'node api/index.js' and the output, which includes the Node.js version (11.0), the path to the script, and the message 'Server is running on PORT : 5000'.

```
api > routes > # user.routes.js > # router
1 import express from 'express'
2 import { create, readAll, read, remove, update, } from '../controllers/emp.controller.js';
3
4 const router = express.Router();
5
6 router.post('/create', create);
7 router.get('/readAll', readAll);
8 router.get('/read/:id', read);
9 router.put('/update/:id', update);
10 router.delete('/remove/:id', remove);
11
12 export default router;
```

```
> node api/index.js
[nodemon] 1.1.0
[nodemon] to restart at any time, enter 'rs'
[nodemon] watching path(s): *.*
[nodemon] watching extensions: js,mjs,cjs,json
[nodemon] starting 'node api/index.js'
Server is running on PORT : 5000
DB connected successfully
```

## CONTROLLERS:

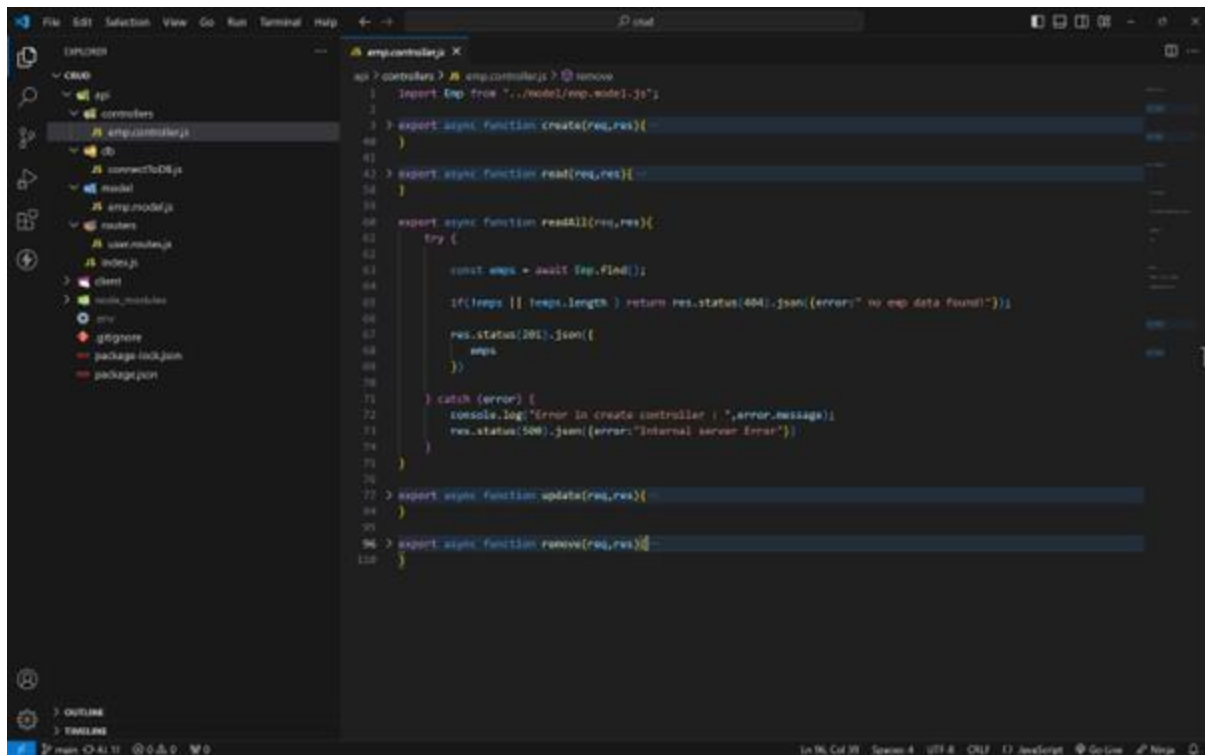

### CREATE :

The screenshot shows a Visual Studio Code editor with a project structure on the left and a code editor on the right. The project structure includes folders for 'api', 'controllers', 'db', 'connectToDB.js', 'model', 'emp.model.js', 'routes', 'user.routes.js', 'index.js', 'client', 'utils\_modules', 'env', 'gitignore', 'package-lock.json', and 'package.json'. The code editor displays the 'emp.controllers.js' file, which contains the following code:

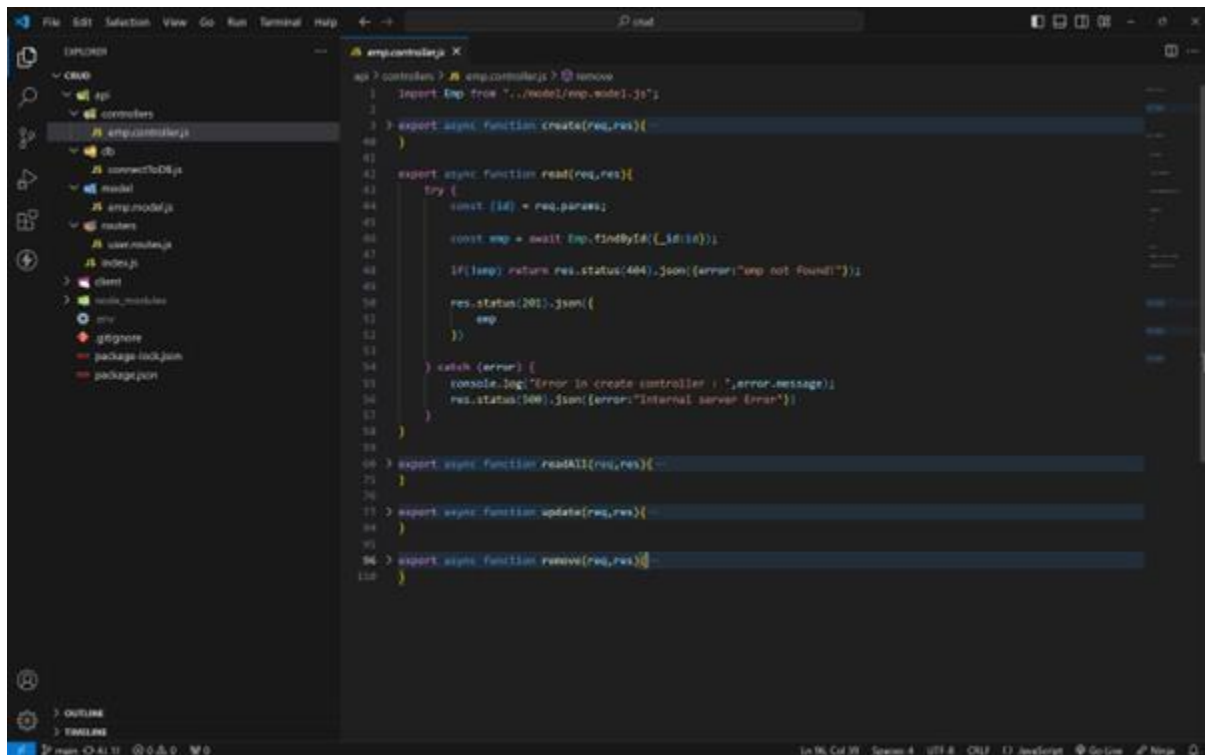

```
1  import Emp from '../model/emp.model.js';
2
3  export async function create(req,res){
4      try {
5          const {username,password,email,role,salary} = req.body;
6
7          console.log(req.body);
8          const emp = await Emp.findOne({username});
9
10         if(emp) return res.status(400).json({error:"username is already exists"});
11
12         const newEmp = new Emp({
13             username,
14             password,
15             email,
16             role,
17             salary
18         });
19
20         if(newEmp){
21             await newEmp.save();
22
23             res.status(201).json({
24                 _id : newEmp._id,
25                 username : newEmp.username,
26                 password : newEmp.password,
27                 email : newEmp.email,
28                 role : newEmp.role,
29                 salary : newEmp.salary
30             });
31         }
32         else{
33             res.status(400).json({error:"Invalid emp data"});
34         }
35     }
36     catch (error) {
37         console.log("Error in create controller : ",error.message);
38         res.status(500).json({message :error.message});
39     }
40 }
```

### READ ALL:

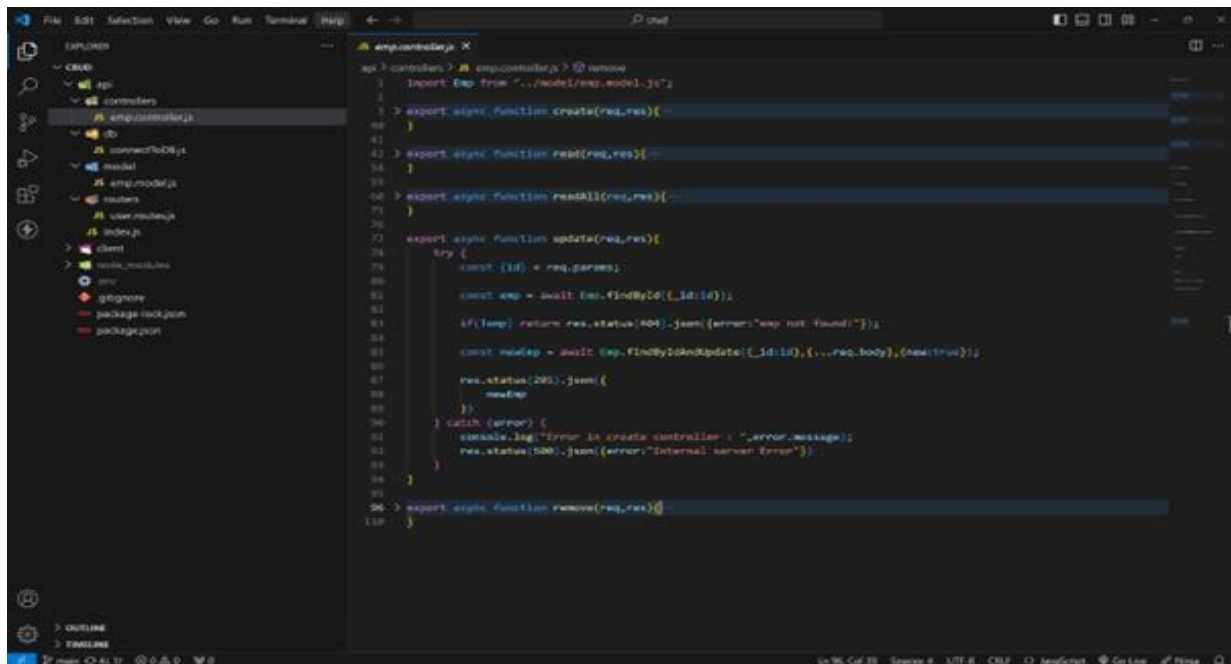

```
1 import Emp from "...model/emp-model.js";
2
3 export async function create(req,res){
4
5 }
6
7 export async function read(req,res){
8
9 }
10
11 export async function readAll(req,res){
12   try {
13     const emps = await Emp.find();
14
15     if(!emps || ! emps.length ) return res.status(404).json({error:"no emp data found!"});
16
17     res.status(201).json({
18       emps
19     })
20   } catch (error) {
21     console.log("Error in create controller : ",error.message);
22     res.status(500).json({error:"Internal server Error"});
23   }
24 }
25
26 export async function update(req,res){
27
28 }
29
30 export async function remove(req,res){
31
32 }
```

**READ ONE :**

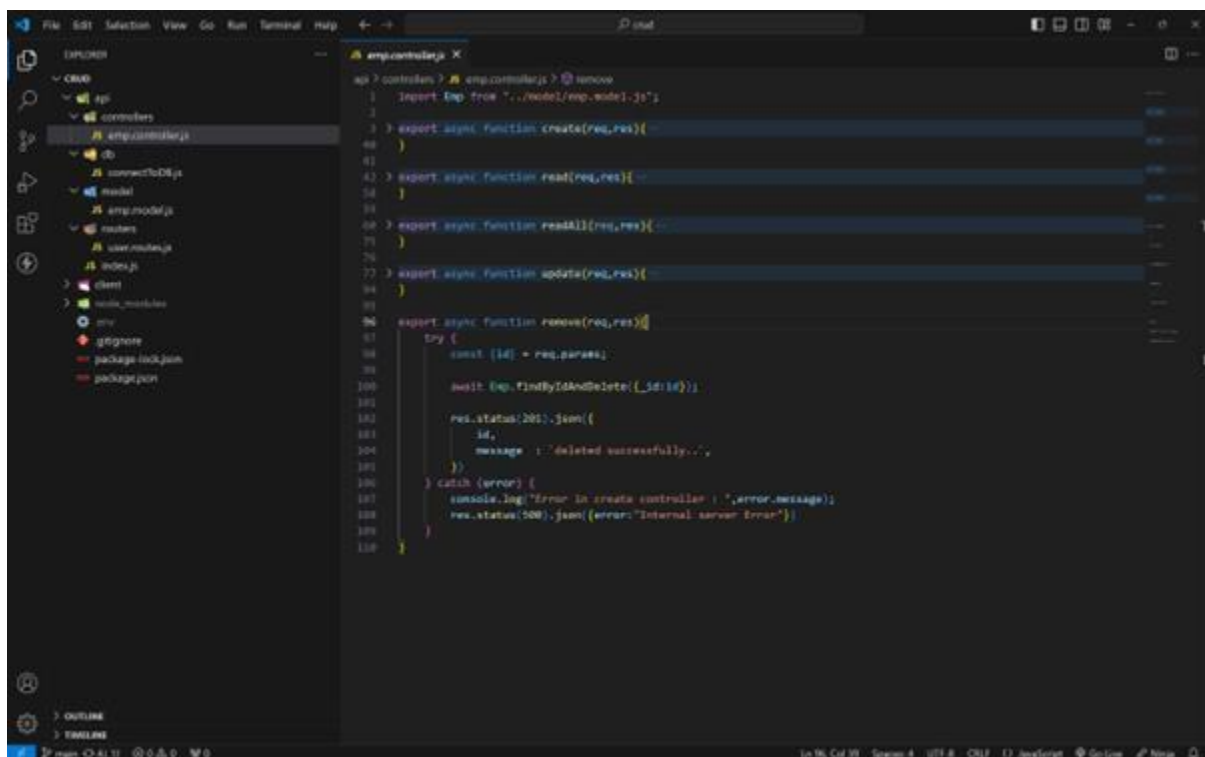

```
1 import Emp from "...model/emp-model.js";
2
3 export async function create(req,res){
4
5 }
6
7 export async function read(req,res){
8   try {
9     const {id} = req.params;
10
11     const emp = await Emp.findById(_id:id);
12
13     if(!emp) return res.status(404).json({error:"emp not found!"});
14
15     res.status(201).json({
16       emp
17     })
18   } catch (error) {
19     console.log("Error in create controller : ",error.message);
20     res.status(500).json({error:"Internal server Error"});
21   }
22 }
23
24 export async function readAll(req,res){
25
26 }
27
28 export async function update(req,res){
29
30 }
31
32 export async function remove(req,res){
33
34 }
```

**UPDATE :**

```
ap > controller > emp.controller.js > @ remove
1  import Emp from '../model/emp-model.js';
2
3  > export async function create(req,res){
4    }
5
6  > export async function read(req,res){
7    }
8
9  > export async function readAll(req,res){
10   }
11
12  > export async function update(req,res){
13    try {
14      const {id} = req.params;
15      const emp = await Emp.findById(_id:id);
16      if(!emp) return res.status(404).json({error:"emp not found"});
17      const newEmp = await Emp.findByIdAndUpdate(_id:id,{...req.body},{new:true});
18      res.status(200).json({
19        newEmp
20      });
21    } catch (error) {
22      console.log("Error in create controller : ",error.message);
23      res.status(500).json({error:"Internal server Error"});
24    }
25  }
26  > export async function remove(req,res){
27  }
```

**DELETE :**

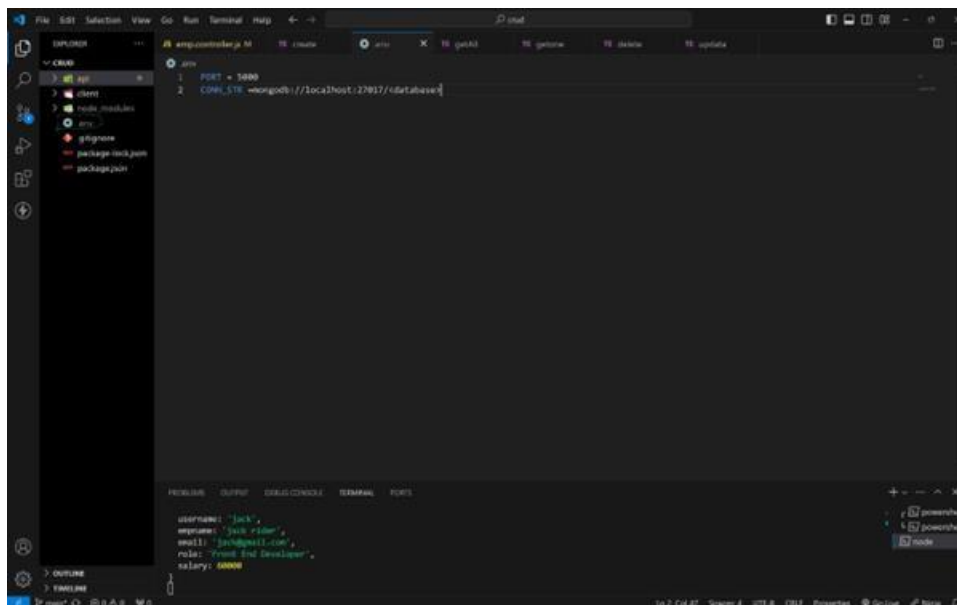

```
ap > controller > emp.controller.js > @ remove
1  import Emp from '../model/emp-model.js';
2
3  > export async function create(req,res){
4    }
5
6  > export async function read(req,res){
7    }
8
9  > export async function readAll(req,res){
10   }
11
12  > export async function update(req,res){
13    try {
14      const {id} = req.params;
15      const emp = await Emp.findById(_id:id);
16      if(!emp) return res.status(404).json({error:"emp not found"});
17      const newEmp = await Emp.findByIdAndUpdate(_id:id,{...req.body},{new:true});
18      res.status(200).json({
19        newEmp
20      });
21    } catch (error) {
22      console.log("Error in create controller : ",error.message);
23      res.status(500).json({error:"Internal server Error"});
24    }
25  }
26  > export async function remove(req,res){
27    try {
28      const {id} = req.params;
29      await Emp.findByIdAndDelete(_id:id);
30      res.status(200).json({
31        id,
32        message : 'deleted successfully...',
33      });
34    } catch (error) {
35      console.log("Error in create controller : ",error.message);
36      res.status(500).json({error:"Internal server Error"});
37    }
38  }
39  }
```

**HOW TO RUN ON LOCALLY :**

- 1 . Create a folder as any name.
- 2 . Open that folder in any code editor (vs code).
- 3 . Open terminal ( ctrl + ~ ) on code editor.
- 4 . Type this code to get code locally.
- 5 . Now move to crud folder (cd crud in terminal)
- 6 . Ignore client folder.
- 7 . Here crud is root folder.
- 8 . In root folder create a .env file and create a PORT and
- 9     CONN\_STR variables and assign value.

ex : PORT = 3000     ( commonly any number between 3000 - 8080 ).  
CONN\_STR = your mongodb\_connection\_string.

--- trouble in above process ? : simply

paste this code in .env file .

10. After in terminal (in crud folder as root folder) type this command to run server.

npm i (installing all dependencies) npm

run dev (to run server)

11. if you get below message in terminal then your server will running successfully.

```
PS C:\Users\4727y\OneDrive\Desktop\internshala\crud> npm run dev

> crud@1.0.0 dev
> nodemon api/index.js

[nodemon] 3.1.0
[nodemon] to restart at any time, enter `rs`
[nodemon] watching path(s): *.*
[nodemon] watching extensions: js,mjs,cjs,json
[nodemon] starting `node api/index.js`
Server is running on PORT : 5000
DB connected successfully
```

## route and its functionality :

For this use any API using tools like Postman or Thunder Client.

i use THUNDER CLIENT.

## CREATE ROUTE :

1 . This route is used to create a new employee in database with a below fields.

username, empname, email, role, salary

2 . in thunder client click on new request and select this options  
method as post url as <http://localhost:5000/api/user/create> pass

this json data as a body as your required value.

```
{
  "username": "jack",
  "empname": "jack rider",
  "email": "jack@gmail.com",
  "role": "Front End Developer",
  "salary": 60000
}
```

}

**3 . finally press send to insert data in mongodb data base and get a inserted data as a**

**response.**

**4 . If user is already in db it will return User is already exist as response.**

**for more details visit below output images...**

### **READ ONE :**

**1 . This route is used to read specific user info by passing that user id as a param. method**

**as get**

**url as <http://localhost:5000/api/user/read/65ed7b3d76e1dcc9a51654ca>**

**2 . After sending you will get that specific user details as response.**

### **READ ALL :**

**1 . Read all route is used to get all the user data existing in the mongodb data base .**

**method as get url as**

**<http://localhost:5000/api/user/readall>**

**2 . After sending you will get that all user details as response.**

### **UPDATE :**

**1 . This route is used to update specific user by passing that user id as**

**a param. method**

**as put**

**url as <http://localhost:5000/api/user/update/65ed7b3d76e1dcc9a51654ca>**

**2 . After sending you will get updated user details as response.**

**DELETE :**

**1 . This route is used to delete specific user by passing that user id as  
a param. method as**

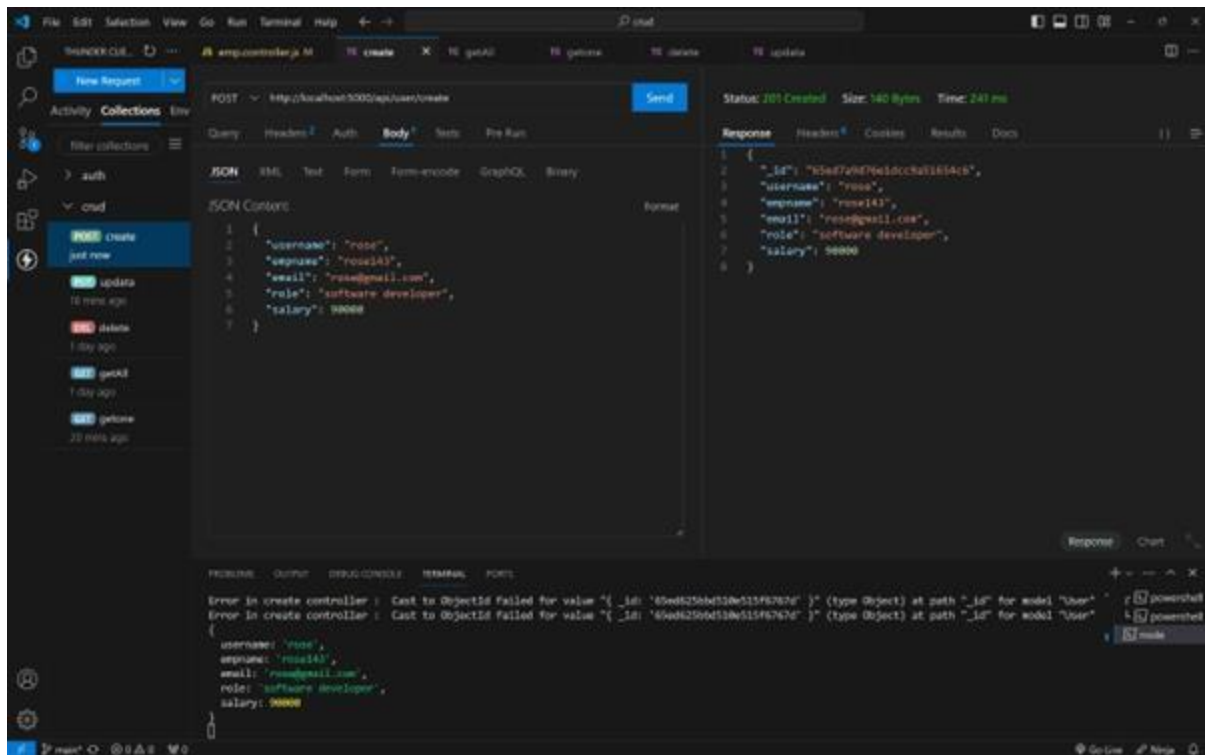

**delete**

**url as <http://localhost:5000/api/user/delete/65ed7b3d76e1dcc9a51654ca>**

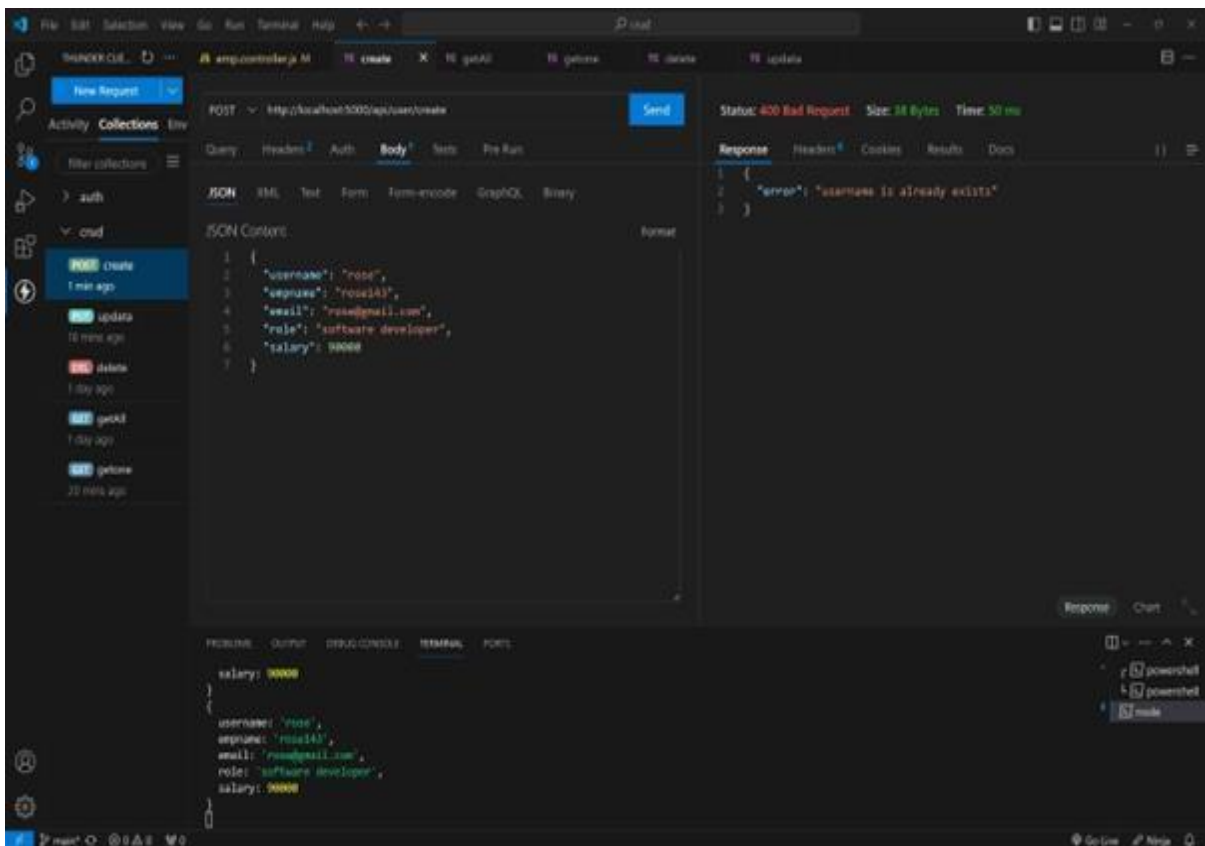

**2 . After sending you will deleted successfully as response.**

**OUTPUT :**

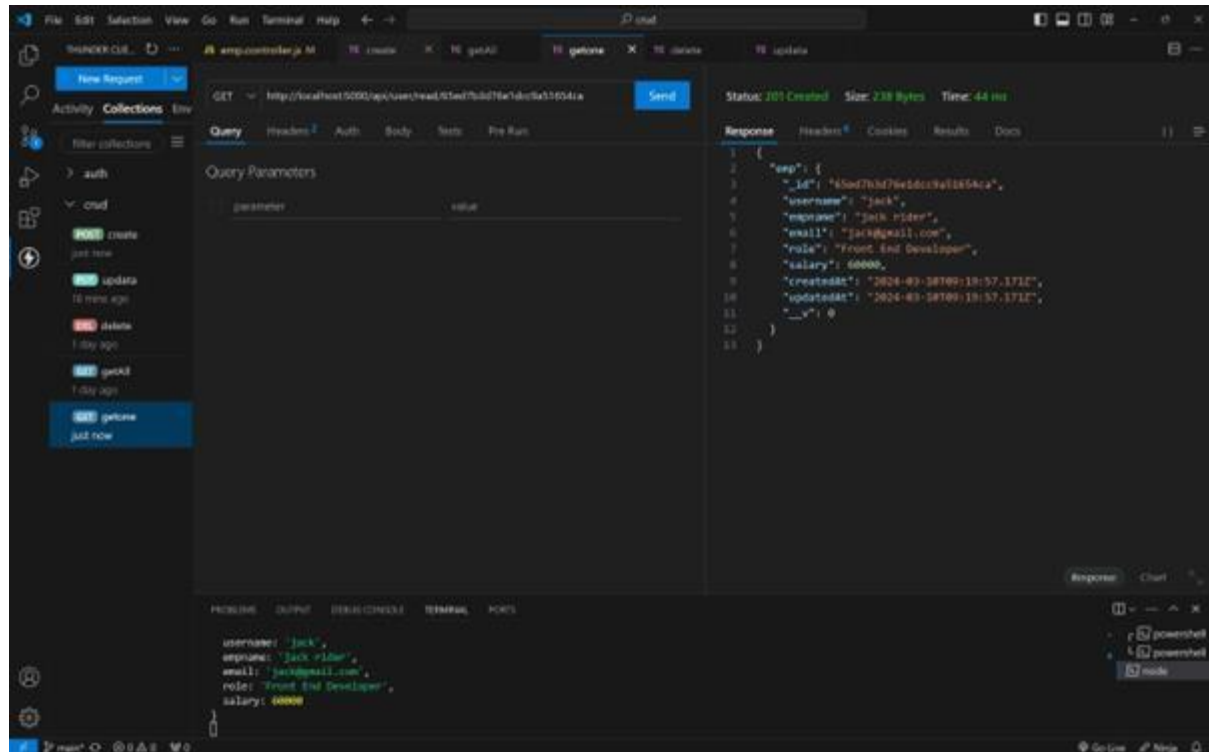

**CREATE A NEW USER :**

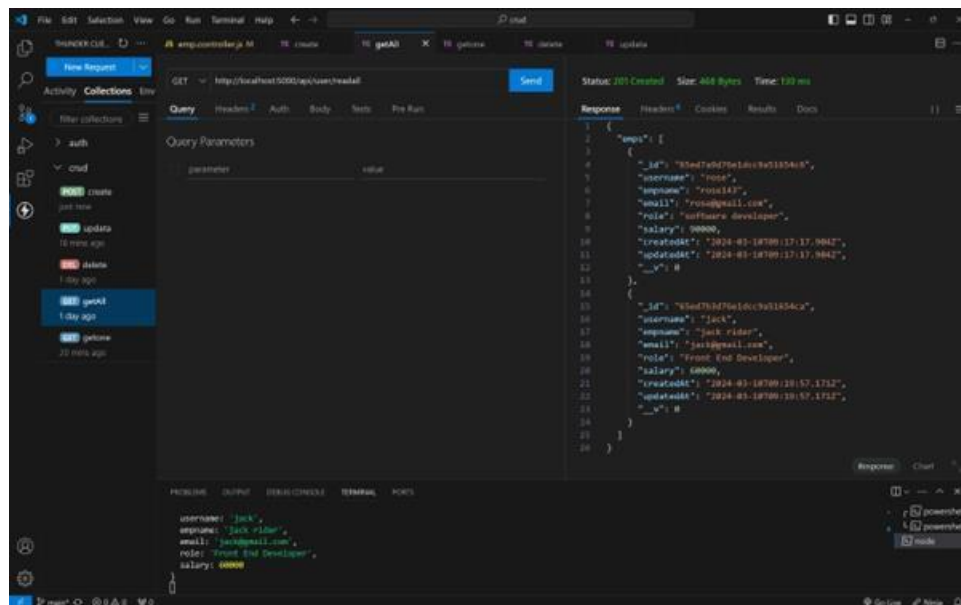

CREATING USER WITH EXISTING USERNAME :
